EZ EDI
ELECTRONIC DATA INTERCHANGE

Administrative Simplification

Managing all data formats for inbound and outbound transaction sets for 'Clearinghouse in a Box' functionality for integrated seamless EDI processing.

REAL-TIME DATA
Harnessing the Value of Your Data

This product offers the latest advancement in electronic data interchange (EDI) to easily retrieve information and perform transactions in real-time directly into EZ-CAP, without going through a clearing house. With the complexities of today's HIPAA EDI formats, EZ-EDI is designed to reduce the time and effort it takes to implement an EDI solution. HIPAA formats are not uniform, requiring multiple modified forms of the standard data sets.

While most vendors require expensive custom maps that are difficult to decipher and translate, EZ-EDI puts the power of graphical mapping into your hands. With a simple drag-and-drop feature, you can easily map inbound and outbound HIPAA standard files to and from your EZ-CAP data sets. The inloading and processing of these files can be automated to virtually eliminate manual interaction, increasing productivity and reducing human error.
